CAMBRIDGE MINERAL RESOURCES PLC

ACQUISITION OF 9 MINING CONCESSIONS IN ANDALUCIA, SPAIN

Cambridge Mineral Resources Plc ("CMR" or "the Company"), the mining exploration and development company, is pleased to announce that it has acquired an option to acquire 100% of a group of 9 mining concessions in Andalusia, Spain.

The concessions are:

District	Deposit group	Name	Area	Minerals
Huelva	Romerita	Romerita	12ha	All metals
		2a San Bartolome	12ha	Fe
		Hispalense	58ha	Cu, Mn, Pb, Zn
		Hispalense 2a	48ha	Cu, Mn, Pb, Zn
		Pimpollar	6ha	Fe
		Segunda Nuestra Senora de los Reyes	12ha	Fe
Sevilla		El Palancar	158P	Mn
		Imprevista	18ha	All metals
		San Pedro	108P	All metals

Romerita:

The database of mineral deposits of the Spanish Mining and Geological Institute (IGME) registers the entire Romerita Group of concessions as one single deposit of manganese longer than 2 km horizontally and width from 8m (Romerita) to as wide as 100 m (Pimpollar) and quartz intrusions wider than 200 m.

This group of concessions were previously mined combining surface and underground methods. They were mined for manganese, but there are evidences of copper and standard polymetallic elements: Zn, Ni and Pb.

Historical production figures state a minimum average grade of 35 %MnO₂ with a large extension of the deposit both horizontally and at depth.

The San Bartolome mine plans show a centre deposit of over 100m horizontally and in some areas wider than 25m, with a vertical depth of 30 m from surface. The deposit is open at depth. There are also satellite deposits.

The Romerita group is located close (2km approx.), along strike, from the main polymetallic mine in Huelva currently in operation, Aguas Teñidas, owned by Trafigura.

The El Palancar concessions are located between the mines Rio Tinto, Aznalcollar and Cobre las Cruces. Historical records indicate production of 300 tonnes per month at 44% MnO₂ and the presence of copper and standard polymetallics.

Geoffrey Hall, chairman of Cambridge Mineral Resources Plc, commented:

“The acquisition of the Romerita, El Palancar, Imprevista and San Pedro group of mining concessions is a very important development in the progress of the Company, being a major part of our plan to target nearer-term production opportunities in Spain. An exploration program and drilling plan is in the course of being established. We will keep shareholders informed of developments as we go forward”.

About Cambridge Mineral Resources Plc:

Cambridge Mineral Resources Plc is a junior exploration company founded in 1992. Its principal focus is the exploration and development of mineral projects in Spain.

The Company has over 2,500 shareholders and has initiated a programme to develop a portfolio of mineral projects at varying stages of commercialisation, supporting its strategy of providing shareholders with upside potential.

Projects include Masa Valverde, one of the largest unmined massive sulphide deposits in western Europe, which is under joint venture with a global commodity trading and mining group.

The Company is currently unlisted; it is considering a listing in due course as and when appropriate.
